2.

Regulatory Requirement Cross-Reference

Regulatory Citation	Requirement (paraphrased)	Where Addressed in this Report
§257.90(e)	Status of the groundwater monitoring and corrective action program	Sections 1 and 3
§257.90(e)	Summarize key actions completed	Section 3
§257.90(e)		

4. STATISTICAL ANALYSIS AND RESULTS

Consistent with the CCR Rule and with the SAP, a prediction limit approach (40 CFR §257.93(f)) was used to identify potential impacts to groundwater. Tables and figures generated as part of the statistical analysis are provided in Appendix C. The steps outlined in the decision framework in the SAP include:

- Interwell versus intrawell comparisons;
- Establishment of the upgradient dataset;
-

4.3. ESTABLISHING UPPER PREDICTION LIMITS

A multi-part assessment of the monitoring wells was performed to determine what type of upper prediction limit (UPL) to calculate as a compliance point. A decision framework was applied for each upgradient well based on interwell/intrawell analysis, data availability, and presence of temporal trends. A summary of th
